

# ABC SEED STARTER

Foliar spray for seeds germination, roots formation and sprouts development.

**Seeds have nutrient reserves to support the initial phases of plant growth, however due to the limited nutrient reserves the germinating seedlings are extremely vulnerable to surrounding conditions. ABC SEED STARTER provides seeds with additional nutrients for strong sprouts growth, and protects young fragile roots and stems from unfavorable environmental conditions, soil pathogens, pests and diseases. ABC SEED STARTER increases germination up to 99%, significantly increases roots amount and strength, health of stem, plant vascular system and first leaves development, making it easy to grow your own food from seeds at home.**

**Easy application- Spray seeds or cuttings before planting or soak overnight in ABC SEED STARTER. Sow seeds according to seed producer's instructions or transfer cuttings to fresh water or soil for further rooting.**
